Biodegradable in Landfill Packaging

Biodegradable in Landfill Packaging

- ▶ Packaging will biodegrade in landfill in an estimated 6-10 years
- ▶ Leaves no micro plastics
- ▶ Microorganisms will consume the plastic
- ▶ Leaving behind only soil & gas
- ▶ Fully recyclable
- ▶ BMP Laboratory Testing
- ▶ Available across our entire range of bottles jars, tubes & closures

- ▶ In 2018, APCO & the Australian Government established a series of targets for sustainable packaging that must be achieved from 2023 leading up to 2025
- ▶ All compostable packaging must be non-fragmentable by 2022
- ▶ 80% of supermarket products to display the new Australasian Recycling Label by end of 2023
- ▶ Packaging must be 100% reusable, recyclable or compostable by 2025
- ▶ Recycling plants have a target that 70% of plastic packaging must be recycled by 2025
- ▶ New Plastic Packaging must have at least 30% recycled content by 2025
